Montecatone Rehabilitation Institute is a highly specialized rehabilitation hospital for intensive rehabilitation of people with spinal cord injury and severe acquired brain injury. The hospital's Spinal Unit is the largest and most important in Italy. The Institute also includes a Critical Care Unit, which allows a very early rehabilitation care, immediately after injury.

On November 21st, 2019, for the international event "**STOP PRESSURE ULCERS 2019**", Montecatone Rehabilitation Institute organized an awareness and information meeting on pressure ulcer management, aimed at patients, relatives, professionals and citizens. The hospital's Wound Care specialists (doctors, nurses and physiotherapists), according to their field of competence, described the possible therapeutic and prevention strategies related to tissue repair.

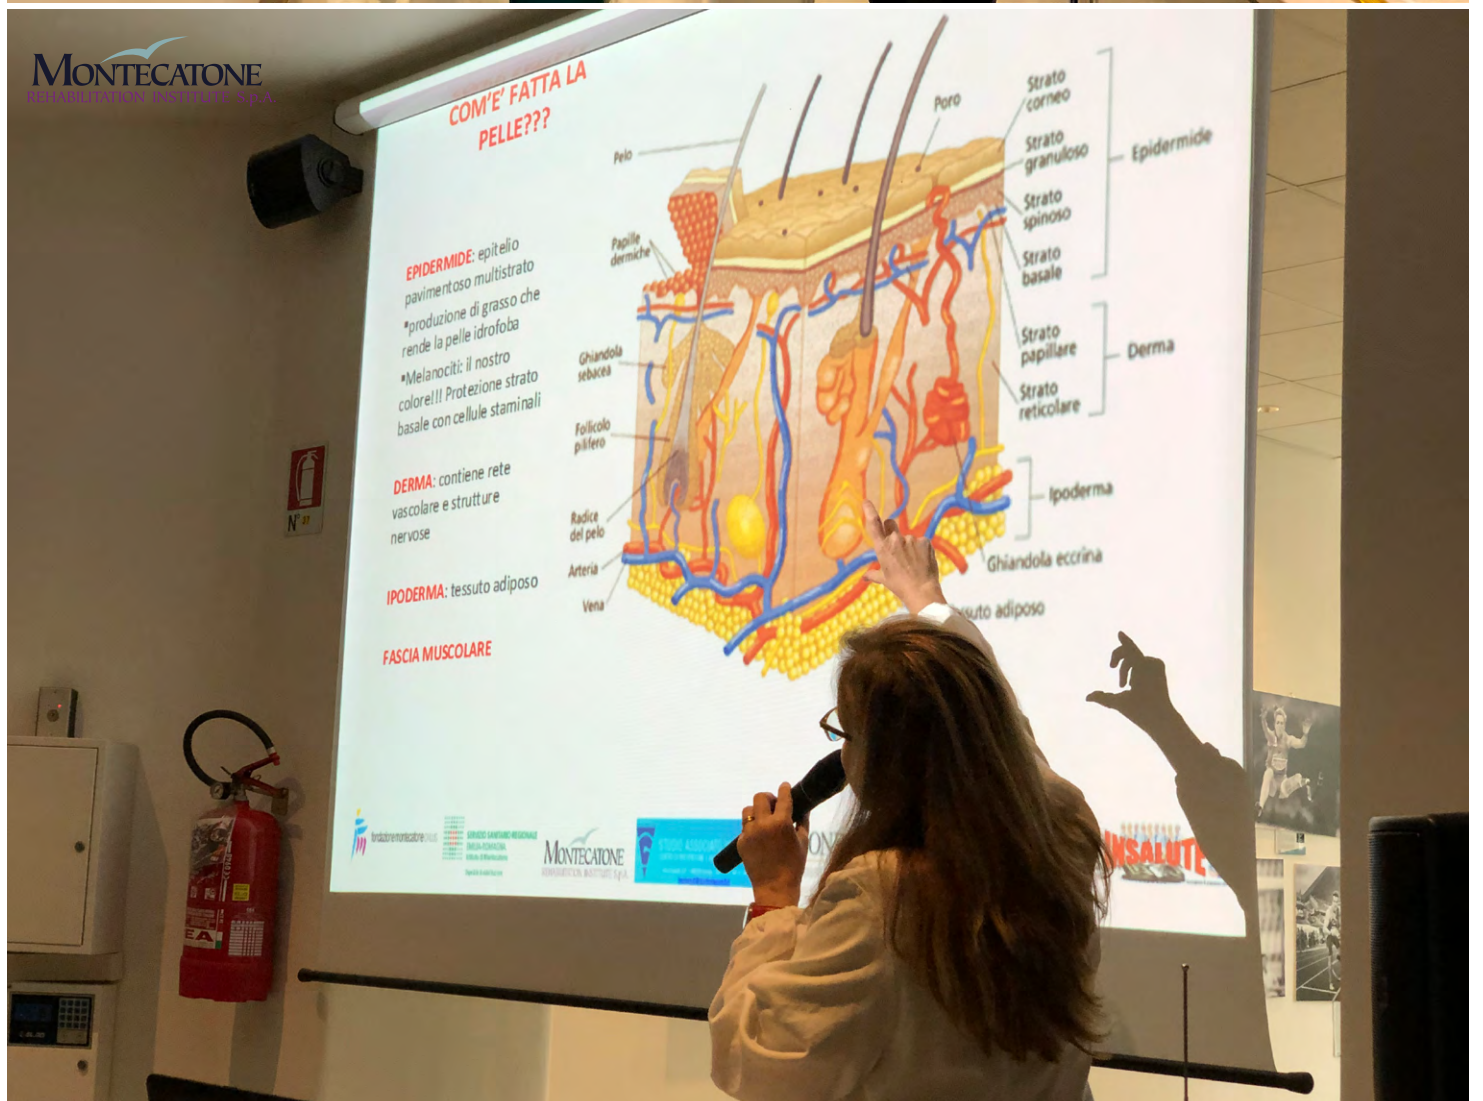

During the day, two brochures, "Guide for prevention and management of pressure ulcers" and "How to manage your skin at home", produced by nurse Luca Spallone, were distributed.

Le Ulcere da Pressione

Danno localizzato alla cute e/o ai tessuti sottostanti che insorge generalmente in corrispondenza di una prominenza ossea, e che è il risultato dell'azione della pressione (o della combinazione di pressione e forze di taglio) cui si possono associare altri fattori contribuenti
