

The Magdi Yacoub Heart Foundation facilitates initiatives focused on the prevention and treatment of pressure ulcers. Additionally, the foundation coordinates awareness-raising events aimed at disseminating knowledge about pressure ulcers among medical professionals. The annual occurrence of this celebration serves the purpose of ensuring that all relevant measures are thoroughly examined and put into practice in order to effectively mitigate the occurrence of pressure ulcers. This is achieved through collaborative effort and applying the recommendations of the European Pressure Ulcer Advisory Panel (EPUAP).
