

"Stop Pressure Ulcers": Awareness and Training Day at the Pisa University Hospital

The Pisa University Hospital hosted "Stop Pressure Ulcers" day, in 20th November 2025, an initiative dedicated to the prevention and treatment of pressure ulcers, a common but avoidable complication in hospitalized patients.

The event, organized in collaboration with the University of Pisa, saw the participation of doctors, nurses, and healthcare professionals engaged in training and awareness-raising activities. The focus of the day was a prevalence survey conducted by the University to map the prevalence of pressure ulcers within the hospital. The data collected will allow us to identify risk factors, monitor the most critical areas, and develop intervention strategies based on scientific evidence.

In addition to research, significant attention was given to training healthcare personnel through practical courses and clinical simulations.

Doctors and nurses were able to practice realistic wound management scenarios, deepening their knowledge of infection prevention, dressing, and monitoring techniques. The multidisciplinary approach, which also involves dietitians and physiotherapists, was emphasized as a key element in ensuring effective and integrated care.

The central message of the day was clear: preventing pressure ulcers is a shared responsibility and represents an investment in patients' quality of life and the efficiency of the healthcare system.

With this initiative, the Pisa University Hospital and the University of Pisa confirm their commitment to transforming research and training into concrete actions, strengthening the fight against pressure ulcers and promoting excellent care.
